TECHNICAL CONSULTANCY

Our experienced technical consultants can bring to bear innovative and practical solutions to all the many challenges encountered along the entire supply chain. We help in quality and functional performance such as improving colourfastness, control of pills, reducing the problem of yellowing, etc. Additionally, we provide practical advice on new product development. SGS can help clients by serving as an impartial third party to identify the causes of technical problems for in legal disputes.

Technical Consultancy Services includes:

- Problem Analysis
- Provide practical solutions
- Detailed technical report on investigation and solutions

PROBLEM-SOLVING SEMINARS AND TRAINING SESSIONS

SGS offers total solutions to all quality problems by a wide range of seminars and training sessions. We are consistently to devise different topics to our clients on the new products and technological information and the latest market trends of the industry. We aim to not only deliver unequalled service but also surpass clients' needs and expectations.

Besides the regular seminars held in major cities, we also provide tailor-made training session to serve your enterprises' needs.

Seminars we are now offering include:

- Inspection and quality control in textiles and garment industry
- Fabric merchandise – from fibre to fabric
- Restricted substances in textiles and accessories
- Footwear testing and quality requirement
- Care labelling of apparel & textile products
- Colour matching and approval techniques

And many more….

CERTIFICATE TRAINING IN COLLABORATION WITH TECHNICAL INSTITUTES

SGS has been approved to deliver certificate training by certain technical institutes. Accredited courses deliver a thorough knowledge and understanding of important testing standards and methods (including ISO and AATCC) applicable to EU and USA markets. The trainees and their organisations benefit from the training as a demonstration of technical competence, mastering their QA roles and conducting tests in a laboratory.

AATCC INTERNATIONAL TRAINING PROGRAM

The AATCC International Training Program began in the summer of 2003 with one trainer in India. The program teaches the proper procedures for many of AATCC's most used Test Method and evaluation procedures in the scope of colourfastness, physical properties and fibre identification (qualitative). The program currently has twenty certified trainers conducting Test Method training in numerous countries throughout the world.

SDC CERTIFIED TRAINING IN ISO COLOURFASTNESS TEST METHODS

The SDC is the only international professional society specifically dedicated to colour in all its manifestations. It was founded in 1884, and was granted a Royal Charter of Incorporation in 1963. SDC is the only organization to award Chartered Colourist certificates through its organized training and board of examination. The SDC is a registered charity, and aims to "advance the science of colour" in the broadest sense.

As colour management is an area requiring geographical standardization, SGS's global coverage is an advantage to enter the SDC's global training network as a link up with the extensive knowledge that SGS has in colour solution capabilities. SGS will share with the industry its latest developments, and this joint professional collaboration enables tailor-made strategy derived for colour management.

IN-HOUSE LABORATORY CONSULTANCY

With increasing quality concern in the market, setting up in-house laboratories can ensure a better quality and cost control. However, establishing an up-to-standard laboratory is never easy. We bring years of experience and technical know-how to help company to set up their own in-house laboratories

Services include:

- Laboratory design
- Equipment sourcing and purchasing
- On-site technical training
- QA system establishment
- Correlation tests
- Laboratory accreditation for buyer program
